

Ramsey County Public Works Facility

Project Summary

- 25 Private Offices
- 30 Workstations
- Lobby
- Teaming Spaces
- Conference Rooms

***Ramsey
County Public
Works Facility***
Arden Hills, MN

It's amazing what can come from a leaky roof. After years of using buckets to catch water drops, Ramsey County officials decided they'd had enough of the troubled facility. In fact, they went on to make an architectural overhaul and tore down the old armory. But, not before reclaiming its wood.

BWBR was entrusted with the transformation, both inside and out. Henricksen worked with them to provide interior design modifications that accommodate Allsteel applications. In addition, Henricksen was responsible for project management to ensure an accurate and timely end result. A sense of the local community was achieved through the use of custom tiling that incorporates scenes from the local neighborhoods, as well as the re-use of wood from the old Ramsey County Hall. In addition, there are many collaborative work areas to support a collaborative and open work culture.

Henricksen created a consistent look through the facility by the application of complementary finishes throughout the various spaces. Ramsey County wanted to upgrade their style through this project and Henricksen was pleased to be part of the process. Now they let the light shine in, while still maintaining their roots from where they came.
